Covid19 Risk Assessment

Most people who are infected with Covid19 will experience mild symptoms, such as a cough and a fever, and will recover without the need for specialist treatment. Evidence suggests that children and adolescents are less likely to develop severe symptoms of the disease but can still transmit the disease to others.

The aim of this risk assessment is to reduce the risk of spreading Covid19 within the club as far as possible, by identifying and implementing measures that will help to keep staff, children and their families safe from infection.

Risk assessment conducted by Leonie Howell- Julians Streatham Manager	Date of risk assessment: 23rd July 2020
---	---

Area for assessment	What is the risk?	Risk level (H/M/L)	What steps have you implemented to reduce the risk?	Risk level (H/M/L)
Risk assessment 2 Movement around the club	<ul style="list-style-type: none"> Entrances causing people to congregate, preventing social distancing. 	M	<ul style="list-style-type: none"> At Julians Streatham we will follow the school's system which is in place for moving around the school. When parent come to drop off and collect we will operate on staff collecting the children from the door in the morning and then taking the children to the Main Hall. In the evening parents are to call the club phone as per usual but then wait for staff to deliver their child to them rather than entering the building. We will contact parents to notify them of this and club mobile numbers will be on the door if parents need to contact staff to say they are ready for collect or drop off. All staff will go to the door with hand sanitiser so when the children come into breakfast club, they will be able to apply hand sanitiser before touching anything on the way to the hall. 	L
